

# Academic Management System

## Introduction

Academic Management System is a web-based windows application software solution to streamline and manage student and faculty information efficiently along with automating processes for the Stakeholders. It helps students, teachers and the school administrative staff to use academic data in a more organized and structured manner.

This project grants faculty easy and organized access to student records, their timetable, notes and detailed syllabus copy. Students have facility for easy access to notes link, their time-table, syllabus copy, notices and faculty information.

## Navigation Structure

This project contains two login portals one for student and another for faculty. Both of them have login and registration options.

On registration your account will be created using Authenticate feature of and all the data will be stored in MongoDB's real-time database.

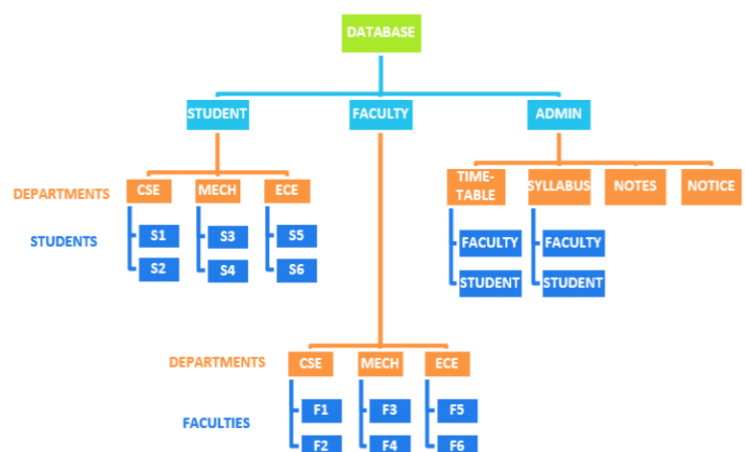

On Signing in as Faculty you will be redirected to the dashboard having the following features:

- Faculty Profile
- Complete department syllabus
- Timetable
- Complete department notes
- Student records
- Update notice option
- Change password option for students
- Logout

On Signing in as student you will be redirected to the dashboard having the following features:

- Student Profile
- Your syllabus
- Timetable
- Your notes
- Faculty details of your teachers
- Notice
- Logout
